Managed Security Services

RIoT Solutions, through its flexibility and customer partnering, provides security assurance to increase your business' digital maturity.

With technology being integrated into every aspect of your business, it is time to consider your company's security position. With technology's pervasive nature, connecting us to customers and integrated Internet of Things, people now have more access to multiple digital platforms, anywhere, any time.

As a result, your business is more susceptible to security weaknesses and the threat actors who attempt to exploit and leverage access to your environment and data. It is critical to understand the importance of maintaining secure operational integrity to minimise the risk of financial loss and reducing the risk of business continuity and reputational damage.

Protecting digital assets requires a strategic approach that addresses security threats, using visibility and intelligence systems to provide a comprehensive overview of the cyber threat landscape that allows your business to gain back control of what's happening in your digital environment.

Key features & benefits of MSS

- Staying ahead of cyber threats – provide intelligence to the cyber threat landscape through access to our comprehensive reports packed with insights & recommendations
- Reduced costs – remove the need to use internal resources and increase cost efficiencies through our processes and procedures
- Improve productivity – access a scalable and flexible solution that allows you to effectively manage and remediate any security incidents with a successful and faster recovery period
- Align security and strategy – protect your most valuable assets by only investing in tools that align with your policies and procedures through prioritisation and risk assessment
- Reserve capabilities and simplify compliance – our expertise in complex digital environments enables your business to be aware of ongoing compliance & security information changes

What does MSS include?

At RIoT Solutions we provide end-to-end solutions through our Security Analysts, using state-of-the-art software and automation to deliver the highest quality service with the inclusion of the following:

SIEM & Threat Intelligence

- Secure private cloud-hosted SIEM management and comprehensive use case library
- Threat management from infrastructure sources
- Visibility through live dashboarding of security events
- 24/7 monitoring and real-time dashboarding with added operational visibility
- Advanced alerting and reduced time to detect security incidents

Vulnerability Management

- Dedicated on-boarding engineer collaboratively works with your project team to reduce onboarding time to a matter of weeks
- Rapidly gain visibility into your most vulnerable systems through proactive and scheduled scans
- Our expert team provides tailored guidance so your organisation can understand the risks and remediations associated with recently disclosed vulnerabilities

User Awareness

- Delivery of quarterly phishing campaigns for organisations' staff to measure the effectiveness of user aware programs
- Defined target list to ensure data is captured for any phishing exercise
- Reporting and recommendations for staff to prevent phishing attacks

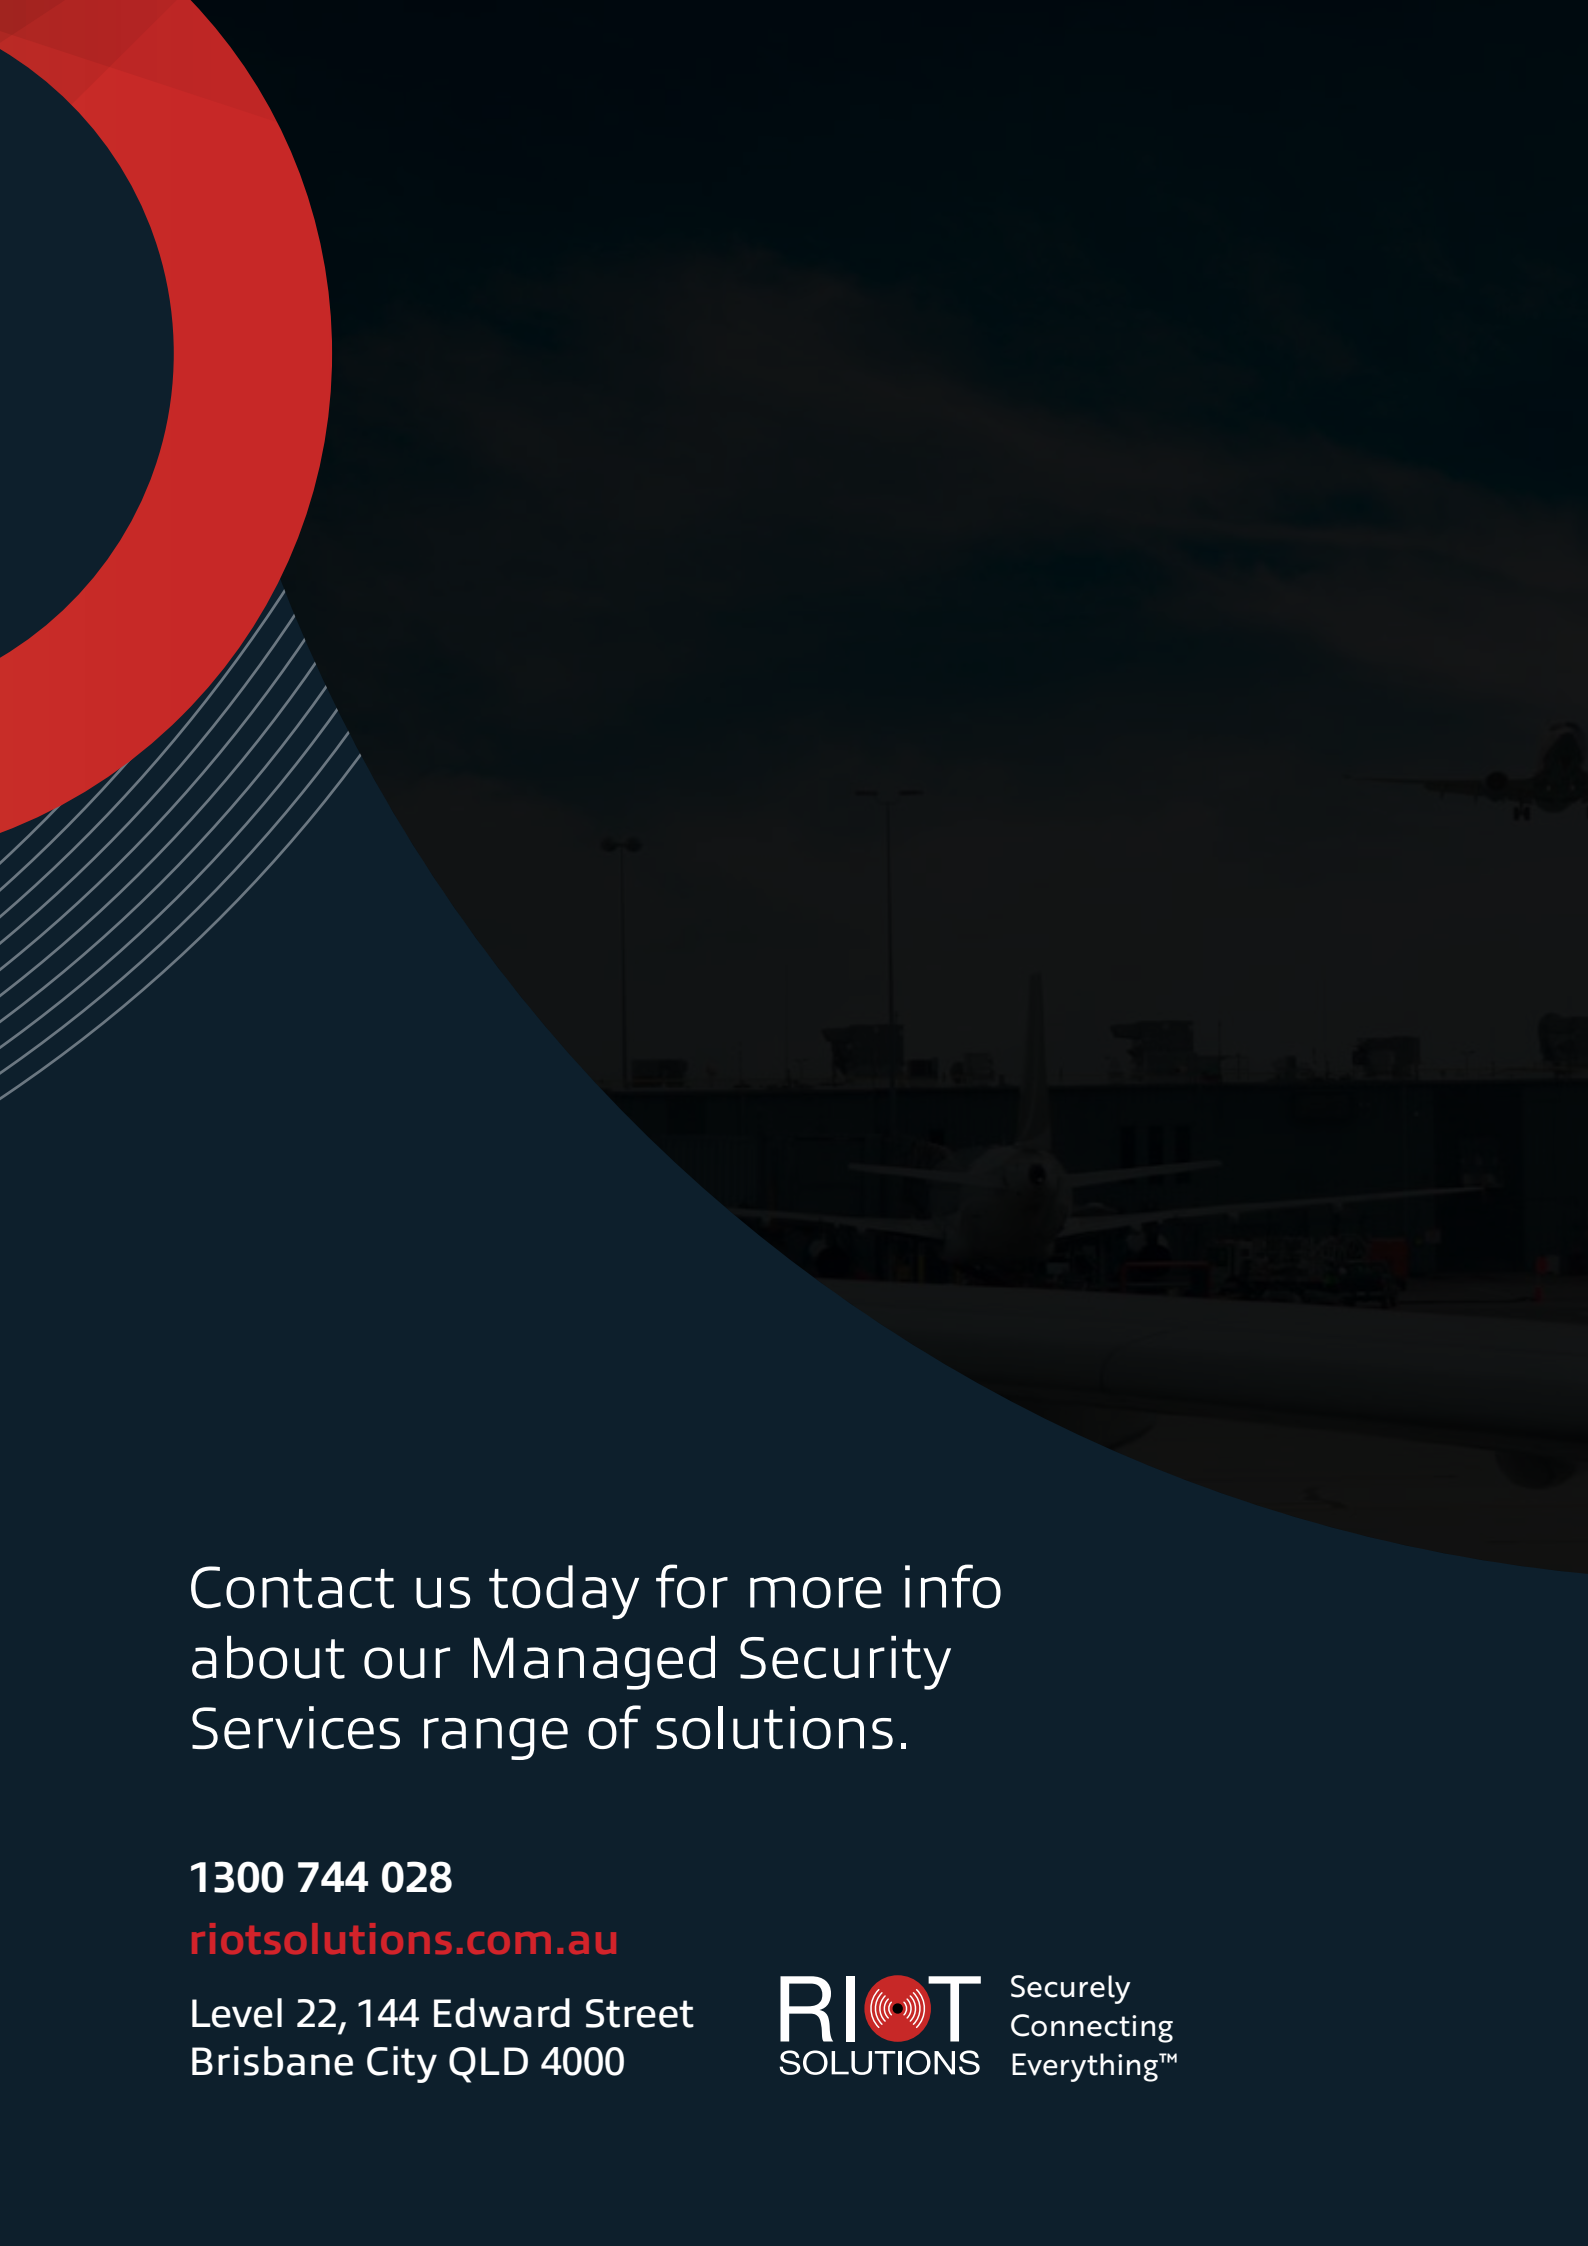

Dark Web Intelligence

- Ability to proactively search extensive dark web sources to identify any threats and unique risks
- Access to over 40 top-tier intelligence feeds (open and commercial) across the dark web
- Delivery of context-specific actionable intelligence from technical, open and proprietary sources
- Regular cyclic scanning to monitor for changes to organisational risk
- Early warning of potential environment compromise

Incident Response

- Certified and experienced response handlers
- Full cyber incident event management
- Cyber attack identification and analysis of systems to understand malicious activity
- Executive communications management and post-incident reporting
- Extensive experience in responding to high impact security incidents including ransomware, phishing, and account compromise.
